

Creating Stunning Visuals With 'Office-Art'

Flowcrete – Kuala Lumpur

When investing in new operations and administration facilities in Kuala Lumpur Flowcrete also decided to totally renovate their existing offices including all new furniture and workstations. They also needed to provide an improved filing storage system dedicated to individual departments throughout the site. Rather than take the conventional route of allocating separate rooms for storing files and documents, Flowcrete requested Fortisco to propose an alternative solution that would provide the required storage to the individual departments without sacrificing valuable working space. The selected proposal involved blocks of Fortisco's Hand Driven Mobile Shelving installed in the actual working areas with end finishing panels printed with stunning visuals of some of Malaysia's most famous views. The mobile shelving now provides maximum storage capacity whilst at the same time, offering a quite spectacular working environment.

Ergonomically designed full length molded handles provide easy access to any

Mobile trollies run on low profile aluminum rails that do not require fixing to the existing floor.

First impressions are so important when walking into a company

By positioning the shelving strategically between departments, the mobiles automatically create a dividing wall that also works as valuable storage space. The chosen panoramic views printed on the end panels creating a

These high quality printed end panels offer a brilliant wall of colour to an area not accessible to any natural light.
