

High density office storage for the oil industry

Chevron, Kuwait

Fortisco and their UK partners Office Storage Solutions (OSS) have recently completed an installation of a large-scale mobile shelving project for one of the world's largest corporations in their new purpose-built Kuwait offices. The project involved installing three Mobile mechanically assisted mobile shelving systems that provide over 1,200 linear meters of state-of-the-art mobile storage

Laying out the floor and rail framework for the mobile system.

Teams of specialized installers were flown out to the site in Kuwait to carry out the installation. The task was completed on time within two weeks, and considering the size of the installation (over 1200 linear meters of storage), this was quite an achievement and was recognized and appreciated by the very grateful client

Creating beauty in the office...

It was a requirement from the client that all mobiles including the support and running rails had to be self supported and nothing was to be fixed or attached to the existing carpeted floors.
